Our YT3 Series tractors are designed to make work easier for people of all skill levels. The YT359 includes an autothrottle that enables you to control the engine and travel speed with the accelerator/drive pedal. This makes operating the tractor like driving a car or truck with an automatic transmission car. A/B Mode lets you preset your maximum travel speed. An anti-stall feature keeps your engine running when you dig or lift a heavy load. There's also cruise control to keep you moving efficiently when mowing or traveling for long stretches. YANMAR designs and builds the major components, engine, front axle, transmission, and final drive, to work together.
